Agricultural forest land definition				

### **Assumptions Used in Arriving at Fiscal Estimate**

Beginning in 2004, certain woodlands will be classified as agricultural forest land. These woodlands must be capable of producing commercial forest products, be contiguous to a wholly agricultural parcel and be owned by the same person as the owner of the agricultural parcel. Agricultural forest land will be assessed at 50% of full value.

The bill changes the definition of agricultural forest land to include woodlands that are part of a parcel that includes agricultural land or are contiguous to a parcel that is classified as wholly agricultural land or contiguous to a parcel that is classified agricultural land and other. The "other" classification refers to farm improvements and the land under the improvements.

According to the most recent U.S. Census of Agriculture (1997), there are approximately 2.8 million acres of woodlands located on Wisconsin farms. Of this amount, 707,500 acres are pastured. If it is assumed that all pastured woodland are currently classified as agriculture, there are 2.1 million acres of land that could be classified as woodlands (2.8 million - 0.7 million). According to Department of Revenue data, the number of forest acres enrolled in special forest tax programs equals approximately one third of the total number of taxable forest acres. It is assumed that a third of the woodlands on farms are enrolled in such programs; as a result it is estimated that there are 1.4 million taxable woodland acres on farms [2.1 million acres x (1-.3333)].

Of this 1.4 million acres of farm woodlands, it is estimated that 20%, or 280,000 acres, meet the current law definition of agricultural forest. It is estimated that the remaining 1.12 million woodland acres on farms would be classified agricultural forest under the bill.

Assuming that a) the 2004/05 full value of forest acres is approximately \$1,600 per acre; b) the 2004/05 statewide net property tax rate under current law would be \$20.022 per \$1,000 of taxable value, and c) the 2004/05 statewide net property tax rate under the bill would be \$20.068 per \$1,000, the bill would result in an estimated property tax shift of \$17.6 million from woodland acres on farms to other taxable property  $[((1.12 \text{ million acres x } \$1,600) + (280,000 \text{ acres x } (\$1,600 \text{ x } .5)) \times .02022) - ((1.4 \text{ million acres x } (\$1,600 \text{ acres x } .5)) \times .02068)].$ 

The bill would require revisions to the Wisconsin Property Assessment Manual and assessor training materials, the cost of which can be absorbed.

The bill would result in an estimated decrease of \$180,000 in state forestry tax collections.

#### Long-Range Fiscal Implications

It is likely that, over time, many woodland owners will clear and cultivate sufficient acreage to meet the definition of agricultural forest land under the bill. It is estimated that, over time, roughly 60% of forestland, or 5.3 million acres, could be affected under the bill. Based on estimates for 2004/05, this would result in a property tax shift of approximately \$56 million from woodland owners to other taxable property and a \$725,000 decrease in annual state forestry tax collections.
